#### Site History

The subject site (Site) has been occupied by Continental Heat Treating (CHT) since 1969 to present, processing metal parts. Chlorinated solvents have impacted the subsurface as a result of operations at the Site, including the use of a solvent degreaser. Tetrachloroethene (PCE) and trichloroethene (TCE) have been detected in soil at concentrations of up to 7,514 micrograms per kilogram (ug/Kg) and 4,759 ug/Kg, respectively. PCE was detected in soil gas at a maximum concentration of 41,300 micrograms per liter (ug/L). Groundwater has also been impacted by releases of chlorinated solvents at the Site.
